

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

Claim 1 (Currently amended): A method for producing a recombinant glycoprotein in a unicellular or filamentous fungus host cell that ~~expresses a glycosidase~~ lacks α 1,6-mannosyltransferase activity, the method comprising the steps of diminishing or depleting the activity of one or more enzymes in the host cell that transfers a sugar residue to the 1,6 arm of a lipid-linked oligosaccharide structure, and introducing into the host cell one or more nucleic acids molecules encoding (i) an α -1,2 α 1,2-mannosidase activity, (ii) and a GlcNAc transferase (GnT) GnT I activity, and (iii) the recombinant glycoprotein.

wherein said method results in the production within the host cell of recombinant glycoproteins having ~~N-glycans~~ N-glycans attached thereto comprising GlcNAcMan_XGlcNAc₂ core structures, wherein X is 3 or 4.

Claim 2 (Currently amended): The method of claim 1, wherein the ~~at least one glycosidase activity is expressed from a nucleic acid molecule introduced into the host cell~~ host cell further includes a nucleic acid molecule encoding a mannosidase II activity and the method results in the production within the host cell of recombinant glycoproteins having N-glycans attached thereto comprising GlcNAcMan₃GlcNAc₂ core structures.

Claim 3 (Currently amended): The method of claim 2, wherein the ~~at least one glycosidase activity is a mannosidase activity~~ host cell further includes a nucleic acid molecule encoding a GnT II activity and the method results in the production within the host cell of recombinant glycoproteins having N-glycans attached thereto comprising GlcNAc₂Man₃GlcNAc₂ core structures.

Claim 4 (Cancelled)

Claim 5 (Canceled)

Claim 6 (Currently amended): The method of claim 1, ~~further comprising the step of expressing within the unicellular or filamentous fungus one or more glycosidase activities to produce a GlcNAc₂Man₃GlcNAc₂ structure wherein the host cell further includes a nucleic acid molecule encoding a GnT II activity and the method results in the production within the host cell of recombinant glycoproteins having N-glycans attached thereto comprising GlcNAc₂Man₃GlcNAc₂ core structures.~~

Claim 7 (Currently amended): The method of claim 6, wherein the ~~one or more enzyme activities is selected from α -1,2-mannosidase, α -1,3-mannosidase and GnTII activities wherein the host cell further includes one or more nucleic acid molecules encoding one or more enzyme activities selected from galactosyltransferase, sialyltransferase, fucosyltransferase, and GlcNAc transferase III, IV, V, and VI.~~

Claim 8 (Previously presented): The method of claim 1, wherein at least one diminished or depleted enzyme is selected from the group consisting of an enzyme having dolichyl-P-Man:Man₅GlcNAc₂-PP-dolichyl α -1,3 mannosyltransferase activity; an enzyme having dolichyl-P-Man:Man₆GlcNAc₂-PP-dolichyl α -1,2 mannosyltransferase activity and an enzyme having dolichyl-P-Man:Man₇GlcNAc₂-PP-dolichyl α -1,6 mannosyltransferase activity.

Claim 9 (Previously presented): The method of claim 1, wherein the diminished or depleted enzyme has dolichyl-P-Man:Man₅GlcNAc₂-PP-dolichyl α -1,3 mannosyltransferase activity.

Claim 10 (Previously presented): The method of claim 1, wherein the enzyme is diminished or depleted by mutation of a host cell gene encoding the enzymatic activity.

Claim 11 (Previously presented): The method of claim 10, wherein the mutation is a partial or total deletion of a host cell gene encoding the enzymatic activity.

Claim 12 (Previously presented): The method of claim 1, wherein the attached N glycans have seven or fewer mannose residues.

Claim 13 (Canceled)

Application No.: 10/500,240
Amendment Date: 11-Mar-10
Reply to Office Action of: 24-Sep-09

Claim 14 (Previously presented): The method of claim 1, wherein the glycoprotein comprises one or more sugars selected from the group consisting of galactose, GlcNAc, sialic acid, and fucose.

Claim 15 (Previously presented): The method of claim 1, wherein the glycoprotein comprises at least one oligosaccharide branch comprising the structure NeuNAc-Gal-GlcNAc-Man.

Claim 16 (Cancelled)

Claim 17 (Currently amended): The method of claim 1, wherein the unicellular or filamentous fungus host cell is selected from the group consisting of *Pichia pastoris*, *Pichia finlandica*, *Pichia trehalophila*, *Pichia koclamae*, *Pichia membranaefaciens*, *Pichia opuntiae*, *Pichia thermotolerans*, *Pichia salictaria*, *Pichia guercuum*, *Pichia pijperi*, *Pichia stiptis*, *Pichia methanolica*, *Pichia sp.*, *Saccharomyces cerevisiae*, *Saccharomyces sp.*, *Hansenula polymorpha*, *Kluyveromyces sp.*, *Candida albicans*, *Aspergillus nidulans*, *Aspergillus niger*, *Aspergillus oryzae*, *Trichoderma reesei*, *Chrysosporium lucknowense*, *Fusarium sp.*, *Fusarium gramineum*, *Fusarium venenatum* and *Neurospora crassa*.

Claims 18-58 (Cancelled)

Claim 59 (Currently amended): A method for producing a human-like glycoprotein in a ~~non-human eukaryotic~~ unicellular or filamentous fungus host cell comprising the steps of diminishing or depleting from the host cell an *alg* gene activity and introducing into the host cell at least one glycosidase activity.

Claims 60-65 (Cancelled)

Claim 66 (New): A method for producing a recombinant glycoprotein in a yeast host cell, the method comprising

(a) providing a yeast host cell in which the activity of an α -1,6-mannosyltransferase and the activity of one or more enzymes in the host cell that transfers a sugar residue to the 1,6 arm of a lipid-linked oligosaccharide structure have been diminished or depleted, and which comprises one or more nucleic acid molecules encoding

(i) an α 1,2-mannosidase catalytic domain fused to a targeting peptide that targets the endoplasmic reticulum (ER) or Golgi apparatus in the host cell,

- (ii) a GlcNAc transferase I (GnT I) catalytic domain fused to a targeting peptide that targets the ER or Golgi apparatus of the host cell, and
- (iii) a recombinant glycoprotein; and
- (b) growing the host cell under conditions to produce the recombinant glycoprotein, wherein the recombinant glycoprotein has *N*-glycans attached thereto comprising GlcNAcMan_xGlcNAc₂ core structures, wherein X is 3 or 4.

Claim 67 (New): The method of claim 66, wherein the host cell further includes a nucleic acid molecule encoding a mannosidase II catalytic domain fused to a targeting peptide that targets the ER or Golgi apparatus of the host cell and wherein the recombinant glycoprotein that is produced has *N*-glycans attached thereto comprising GlcNAcMan₃GlcNAc₂ core structures.

Claim 68 (New): The method of claim 67, wherein the host cell further includes a nucleic acid molecule encoding a GnT II catalytic domain fused to a targeting peptide that targets the ER or Golgi apparatus of the host cell and wherein the recombinant glycoprotein that is produced has *N*-glycans attached thereto comprising a GlcNAc₂Man₃GlcNAc₂ structure.

Claim 69 (New): The method of claim 66, wherein the host cell further includes a nucleic acid molecule encoding a GnT II catalytic domain fused to a targeting peptide that targets the ER or Golgi apparatus of the host cell and wherein the recombinant glycoprotein that is produced has *N*-glycans attached thereto comprising a GlcNAc₂Man₃GlcNAc₂ structure.

Claim 70 (New): The method of claim 66, wherein the host cell further includes one or more nucleic acid molecules encoding one or more sugar transporters selected from UDP-GlcNAc transporter, UDP-galactose transporter, GDP-fucose transporter, and CMP-sialic acid transporter.

Claim 71 (New): The method of claim 66, wherein the host cell further includes one or more nucleic acid molecules encoding at least one enzyme activity selected from galactosyltransferase, sialyltransferase, fucosyltransferase, and GlcNAc transferase III, IV, V, and VI.

Claim 72 (New): The method of claim 66, wherein at least one diminished or depleted enzyme is selected from the group consisting of an enzyme having dolichyl-P-Man:Man₅GlcNAc₂-PP-dolichyl alpha-1,3 mannosyltransferase activity; an enzyme having

dolichyl-P-Man:Man₆GlcNAc₂-PP-dolichyl alpha-1,2 mannosyltransferase activity and an enzyme having dolichyl-P-Man:Man₇GlcNAc₂-PP-dolichyl alpha-1,6 mannosyltransferase activity.

Claim 73 (New): The method of claim 66, wherein the diminished or depleted enzyme has dolichyl-P-Man:Man₅GlcNAc₂-PP-dolichyl alpha-1,3 mannosyltransferase activity.

Claim 74 (New): The method of claim 66, wherein the diminished or depleted enzyme activity is by mutation of a host cell gene encoding the enzymatic activity.

Claim 75 (New): The method of claim 74, wherein the mutation is a partial or total deletion of a host cell gene encoding the enzymatic activity.

Claim 76 (New): The method of claim 66, wherein the glycoprotein comprises one or more sugars selected from the group consisting of galactose, GlcNAc, sialic acid, and fucose.

Claim 77 (New): The method of claim 66, wherein the glycoprotein comprises at least one oligosaccharide branch comprising the structure NeuNAc-Gal-GlcNAc-Man.

Claim 78 (New): The method of claim 66, wherein the yeast host cell is selected from the group consisting of *Pichia pastoris*, *Pichia finlandica*, *Pichia trehalophila*, *Pichia koclamae*, *Pichia membranaefaciens*, *Pichia opuntiae*, *Pichia thermotolerans*, *Pichia salictaria*, *Pichia guercuum*, *Pichia pijperi*, *Pichia stiptis*, *Pichia methanolica*, *Pichia sp.*, *Saccharomyces cerevisiae*, *Saccharomyces sp.*, *Hansenula polymorpha*, *Kluyveromyces sp.*, and *Candida albicans*.

Claim 79 (New): The method of claim 66, wherein the yeast host cell is *Pichia pastoris*.

Claim 80 (New): A method for producing a recombinant glycoprotein in a yeast host cell, the method comprising

(a) providing a yeast host cell in which the α -1,6-mannosyltransferase activity and dolichyl-P-Man:Man₅GlcNAc₂-PP-dolichyl alpha-1,3 mannosyltransferase activity of the host cell have been diminished or depleted, and which comprises one or more nucleic acid molecules encoding

- (i) an α 1,2-mannosidase catalytic domain fused to a targeting peptide that targets the endoplasmic reticulum (ER) or Golgi apparatus in the host cell,
 - (ii) a GlcNAc transferase I (GnT I) catalytic domain fused to a targeting peptide that targets the ER or Golgi apparatus of the host cell, and
 - (iii) a recombinant glycoprotein; and
- (b) growing the host cell under conditions to produce the recombinant glycoprotein, wherein the recombinant glycoprotein has *N*-glycans attached thereto comprising GlcNAcMan₃GlcNAc₂ core structures.

Claim 81 (New): The method of claim 80, wherein the host cell further includes a nucleic acid molecule encoding a GnT II catalytic domain fused to a targeting peptide that targets the ER or Golgi apparatus of the host cell and wherein the recombinant glycoprotein that is produced has *N*-glycans attached thereto comprising a GlcNAc₂Man₃GlcNAc₂ structure.

Claim 82 (New): The method of claim 80, wherein the host cell further includes one or more nucleic acid molecules encoding one or more sugar transporters selected from UDP-GlcNAc transporter, UDP-galactose transporter, GDP-fucose transporter, and CMP-sialic acid transporter.

Claim 83 (New): The method of claim 80, wherein the host cell further includes one or more nucleic acid molecules encoding at least one enzyme activity selected from galactosyltransferase, sialyltransferase, fucosyltransferase, and GlcNAc transferase III, IV, V, and VI.

Claim 84 (New): The method of claim 80, wherein the diminished or depleted enzyme activity is by mutation of a host cell gene encoding the enzymatic activity.

Claim 85 (New): The method of claim 84, wherein the mutation is a partial or total deletion of a host cell gene encoding the enzymatic activity.

Claim 86 (New): The method of claim 80, wherein the glycoprotein comprises one or more sugars selected from the group consisting of galactose, GlcNAc, sialic acid, and fucose.

Claim 87 (New): The method of claim 80, wherein the glycoprotein comprises at least one oligosaccharide branch comprising the structure NeuNAc-Gal-GlcNAc-Man.

Application No.: 10/500,240
Amendment Date: 11-Mar-10
Reply to Office Action of: 24-Sep-09

Claim 88 (New): The method of claim 80, wherein the yeast host cell is selected from the group consisting of *Pichia pastoris*, *Pichia finlandica*, *Pichia trehalophila*, *Pichia koclamae*, *Pichia membranaefaciens*, *Pichia opuntiae*, *Pichia thermotolerans*, *Pichia salictaria*, *Pichia guercuum*, *Pichia pijperi*, *Pichia stiptis*, *Pichia methanolica*, *Pichia sp.*, *Saccharomyces cerevisiae*, *Saccharomyces sp.*, *Hansenula polymorpha*, *Kluyveromyces sp.*, and *Candida albicans*.
